Backend

First week - setting up the database and implementing the necessary things on it, and also prepare the login and sign up page and give the frontend dev the API to interact with.

Second week - make the code for the page tutorial so that people can contribute to Blockchain technology tutorial in general. And release the API for the frontend to work on.

Third week - starting up the community section tutorial page, Solutions, and article, for people to add and publish their solution, article or tutorial….

Frontend

Firstweek - User interface of the landing page and tutorial page.

Second week - Working in the inner pages of the tutorial and make any available write up course ready including the login and sign up page….

Third week - User interface of the community section, dashboard and other necessary things to work on..

Fourth week - bring the PlatON developer documentation on board and work on the inner pages for blog, tutorial and article, and also implement the API on it……
